

The next generation of vehicle tracking is launched

Blackburn, Lancashire - January 2nd 2008: Neil Howard Telecoms today announced that Navman Wireless has launched the next generation of vehicle tracking software, offering companies managing fleets radical and dynamic new ways of viewing driver locations.

The Navman Wireless system uses GPS satellite technology and Vodafone GPRS network that enables live vehicle-tracking information to be visible automatically and across multiple sites within seconds for a fixed cost. This means that there is no variable usage bill for customers using the tracking system.

The next generation of vehicle tracking, "OnlineAVL2", integrates full aerial photographic images with traditional street level mapping to display, at a glance from any PC, the position of vehicles in relation to neighbourhood buildings, depots, car parks etc.

Howard Jones, Managing Director at Neil Howard Telecoms "We are very pleased to partner with Navman and deliver this product on their behalf, it is one of the most user friendly tracking applications on the market."

Neil Howard Telecoms was established in 1985 and has over 20 years of experience in telecommunications. They work to a simple philosophy. Listen to the needs of each customer and help them to choose the best communications solution: From Voice to Landline & IP Telephony, Data and Vehicle Tracking, guaranteeing total satisfaction. The shared vision of every one of their employees is their biggest asset.

Tony Neill, Vice President Europe, Middle East and Africa at Navman "Having partners like Neil Howard Telecoms along with the advancements of OnlineAVL2, strengthens Navman Wireless's vehicle tracking and fleet management system as the most complete and cost effective on the market."
